

BUSINESS DASHBOARD CREATION USING POWER BI

Name: Tanishka Saini

Project Title: Global Superstore Business Dashboard

Objective

The objective of this project is to create an interactive business dashboard using Power BI to analyze sales performance, profitability, customer behavior, and regional trends. The dashboard helps in understanding business performance through data visualization and key performance indicators (KPIs).

Dataset

Global Superstore Dataset

Tools Used

- Power BI
- Microsoft Excel / CSV Dataset

Dashboard Components

- Total Sales KPI
- Total Profit KPI
- Total Orders KPI
- Total Customers KPI
- Year-wise Sales Trend
- Profit by Sub-Category
- Sales by Region
- Global Sales Distribution Map
- Top 10 Customers by Sales

- Sales by Category
- Interactive Filters (Market, Region, and Sub-Category)

Key Findings

- Total Sales achieved: 12.64 Million
- Total Profit generated: 1.47 Million
- Total Orders processed: 25.03 Thousand
- Total Customers served: 1.59 Thousand
- Sales increased consistently from 2011 to 2014.
- Technology was the highest-performing product category.
- The Central region contributed the largest share of sales.
- Top customers generated a significant portion of total revenue.

Business Recommendations

- Increase investment in high-performing product categories.
- Focus marketing efforts on profitable regions.
- Improve profitability in low-performing sub-categories.
- Strengthen customer retention strategies for top customers.
- Use dashboard insights for data-driven business decisions.

Conclusion

The Power BI dashboard provides a comprehensive view of business performance through interactive visualizations and KPIs. It enables better decision-making by identifying trends, analyzing customer behavior, and monitoring profitability across different regions and product categories.
